Art Unit: 1764

1. Claims 1-2 are directed to an allowable product. Pursuant to the procedures set forth in the Official Gazette notice dated March 26, 1996 (1184 O.G. 86), claims 3-5, directed to the process of making or using the patentable product, previously withdrawn from consideration as a result of a restriction requirement, Claims 3-5 are now subject to being rejoined. Process claims 3-5 have been hereby rejoined and fully examined for patentability under 37 CFR 1.104. Claims 6-7, not directed to the process of making or using the patentable product, will not be rejoined.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. McGowan on September 17, 2004.

The application has been amended as follows:

In the Title:

After "Compositions", delete ",", and insert --and--; delete "and apparatus"

In the Claims:

Cancel claims 6-7 non-elected without prejudice.

3. The following is an examiner's statement of reasons for allowance:

The invention relates to a cold extruded composition comprising a fat phase having an overrun of at 90%, wherein at least 45% w/w of the fat phase is liquid at -5°C. A process and apparatus for preparing the cold extruded ice cream composition is

claims which provides a freezer barrel for aerating a mix comprising a fat phase in a freezer barrel enclosing an internal volume, the internal volume comprising aeration means which displaces less than 40% of the internal volume of the freezer barrel and out flow means, wherein after the composition is aerated the mixed is extruded through a cold extruding means wherein the aeration means displaces less than 40% of the internal volume and at least 45% w/w of the fat phase is liquid at -5°C. The prior art fails to teach and or suggest a cold extruded ice cream composition, which has an overrun of at least 90% and wherein 45% w/w of the fat phase is liquid at -5°C. The prior art fails to recognize that cold extrusion of a composition which has a high proportion of fat which is liquid at -5°C has poorer aeration and there is difficulty in providing an overrun of at least 90% when the fat is liquid as the liquid fat provides a less stable emulsion than would a solid fat and the present invention solves the problem of aeration by providing aerating means that displaces less than 40% of the internal volume of the freezer barrel, thereby superseding the prior art's method, apparatus and composition.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to N. Bhat whose telephone number is 571-272-1397. The examiner can normally be reached on Monday-Friday, 9:30AM-6:00PM.
